**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election with traverse of Group II, claims 33-38 in the reply filed on 6/23/08 is acknowledged. The traversal is on the ground(s) that examining all claims would not represent an undue burden on the examiner. This is not found persuasive because the different Groups (I-V) are classified in class/subclass 523/116, 106/719, 524/321, 501/124 and 526/194 respectively. Searching all these subclasses would place an undue burden on the examiner.

The requirement is still deemed proper and is therefore made FINAL.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 33-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Draenert 4,373,217 or Bajpai 4,668,295, in view of Doxa Certex Aktiebolag WO 01/76535..

Draenert discloses tricalcium phosphate with its particle size and acrylic prepolymer in claim 12 and acrylic or methacrylic monomer in claim 14. Claim 13 shows the tricalcium phosphate with the monomers and claim 15 adds the prepolymers. Bajpai teaches polyfunctional carboxylic acids and a bone substitute in claim 1, tricalcium phosphate as the bone substitute in claim 6 and calcium aluminate, calcium phosphate or aluminocalcium oxide-phosphorus pentoxide ceramics as the bone substitute in claim 9. For particle size see claim 18. Doxa recites a ceramic powder with a degree of compactness of 55-67% in the Abstract. Since "up to" includes zero, claim 38 is meaningless. It would have been obvious to one having ordinary skill in the art, at the time the invention was made to select applicants' ingredients from a list of equivalents and to have the degree of compactness shown by Doxa because the powdered binding agent of the secondary reference is in the same family as the powders of the primary references.
